

Jefferson County, TX netDMS Conversion Training

As part of our commitment to our clients, Vista is proud to offer customized training programs for our clients. Whether you are apprehensive about converting to netDMS, interested in learning a little bit more about our Pro Se product for the self represented litigant (using A2J Author® software), or simply want to enhance your document management skills, our training programs may fit you or your staff needs.

As a testament to our training programs, a recent class was presented to Jefferson County, Texas staff concerning netDMS conversion, specifically in converting custom applications. Attended by Jefferson County staff and led by Development Manager, Julie McCrory, and Lead Developer, Max Yeste.

Jeff Ross, Senior Programmer/Analyst, Jefferson County, TX, "We really appreciated having the opportunity to attend a developers' training session with the staff at VistaSG. With our conversion from VISIFlow to netDMS scheduled, our staff has been hard-pressed to learn how to redevelop all our custom applications to work with the netDMS imaging system. Julie and her staff worked out a very thorough agenda of items to be discussed over a two-day period with her and Max sharing various aspects pertinent to the requirements for our custom applications for the netDMS environment.

About 3 weeks prior to the training, Julie had requested specific details about the types of applications that our staff have developed for VISIFlow as well as any questions or problems we were encountering on our preliminary development with netDMS.

Julie and Max were very successful in providing the information necessary to specifically address these needs as well as leave us with knowledge of all the tools that are available in the netDMS system from a developer's point of view for any future development on our part. Although they could have easily spent the full two days covering all the material they had laid out they were able to cover it in the first day due to their helpful documentation and their approach in using a live coding demonstration along with pre-developed examples.

Before attending this training, Jefferson County was somewhat apprehensive about going forward with the conversion to netDMS, but now we are ready to move forward with the netDMS conversion."
